

Australia's  
broadband  
network  
bring it on

This is your opportunity to be more productive, more creative, more efficient and better connected.

Switching to the nbn™ network isn't automatic. Here's what you need to do:

- 1 Contact a phone or internet provider
- 2 Ask about switching your phone or internet to the nbn™ network
- 3 Choose a plan that suits your needs

For more information visit [nbn.com.au](http://nbn.com.au) or call nbn on 1800 687 626 9am-5pm AEST Mon-Fri.

# Hello Port Augusta

The nbn™ network is right on your doorstep.

Australia's  
broadband  
network  
bring it on

## Australia's new broadband network is here.

We're busy making sure Australia is ready for the future, with a fast, reliable network. The **nbn**<sup>™</sup> network will give us all the opportunity to do more. Whether working or playing, learning, or just having fun, the **nbn**<sup>™</sup> network will be a part of everyday life for decades to come. And now it's on your doorstep.

### How the average Australian home might soon look.

In 2020, it's anticipated that the average Australian home will have 29 internet connected devices.\* To work at their best together, they each need plenty of bandwidth; something the **nbn**<sup>™</sup> network helps to deliver.

**In 2020, many of us will connect, control and/or monitor our homes online.**

\* 'Internet Uninterrupted: Australian Households of the Connected Future' (2015), a Telsyte research paper commissioned by **nbn**. † Services provided over the **nbn**<sup>™</sup> network will be replacing phone and internet services provided over most of the existing landline networks, including copper and the majority of HFC networks within the fixed line footprint. Services provided over existing fibre networks (including in-building, health and education networks) and some special and business services may not be affected. To find out if your services will be affected, please contact your current phone or internet provider. For more information, visit [nbn.com.au/switchoff](http://nbn.com.au/switchoff) or call 1800 687 626. © 2016 nbn co ltd. 'nbn', 'bring it on', 'Sky Muster' and the Aurora device are trade marks of nbn co ltd | ABN 86 136 533 741.

## Five things you need to know, even if you only have a landline phone.

### 1. What's the **nbn**<sup>™</sup> network?

The **nbn**<sup>™</sup> network is Australia's exciting new landline phone and internet network designed to provide you with access to fast, reliable phone and internet services, wherever you live.

### 2. Why do we need it?

With so many connected devices now in the home and workplace, the way we access and use data has changed forever. A fast broadband network will ensure Australia is ready for the next generation of connected homes and businesses.

### 3. What do I need to do?

In most areas, once the **nbn**<sup>™</sup> network is available, you'll need to move your phone and internet services to it to make sure they continue working.† Check with your service provider to find out whether your services will be affected.

### 4. How can I get the **nbn**<sup>™</sup> network?

As a wholesaler, **nbn** doesn't sell directly to the public. That means once it's in your area, you'll need to talk to a phone or internet provider about moving your services. Whether you're a home, or business user, they won't be switched over automatically.

To make the switch, call a phone or internet provider and ask about moving to a plan that uses the **nbn**<sup>™</sup> network.

### 5. What if I don't make the switch?

The **nbn**<sup>™</sup> network rollout affects almost all of us, with access expected to be available to 8 million homes and businesses by 2020. Most people will need to act to stay connected, even if they just have a landline phone.†

Find out when you can connect to the **nbn**<sup>™</sup> network.
